I left messages with Weston to call you. If you don't hear from them in the next hour, let me know.

Different spill. This is the WV spill that is now moving down the Ohio River.

MCHM = methoxy methanol

Thanks.

Steve, is this new or is this related to Jon Gulch's site? He already has Weston and an open TDD...

what's the rough location of the site and what does MCHM mean?

Sam:

This email is a request for a START TDD for the **Ohio River MCHM Spill**. Estimate 40 hours. I need START to report to ORSANCO to review data and update EPA on response status.

Please utilize Weston since they are local.

Thanks.
